FACEplan for younger
looking skin

Everyone is unique; we all have different features, skin conditions and facial movements. To achieve and maintain the best results for looking good and feeling great your cosmetic treatments should be as individual as you are. Many skin treatments are non-permanent, to maintain their effect they need to be repeated at regular intervals. With FACEplan your practitioner will be free to schedule the most appropriate and effective treatments as and when you need them.

Foundation and Choice

Your personal FACEplan includes the Foundation benefits and at least one Choice benefit, chosen in consultation with your practitioner

Foundation benefits

All FACEplan members enjoy foundation benefits for £7.00 per month, these are:

Two free skin consultations per year

Four tubes of dermaceutical products each year

15% discount on facial skin care products - cosmeceuticals

10% discount on anti-ageing treatments - skinceuticals

Choice benefits

Choice benefits are specific to you and will be recommended by the practitioner. The average FACEplan saving on these treatments is up to 10%

Muscle relaxing injections

Botulinum toxin is a purified bacterial substance that blocks muscle nerve signals. The dentist can safely inject botulinum toxin to weaken facial muscle and diminish unwanted wrinkles and frown lines that appear across the forehead and at the corners of the eyes (crow's feet).

Dermal fillers

Dermal fillers are soft tissue and flexible substances that can be injected into the skin to create a smoother, younger appearance by improving fine lines and wrinkles, plumping lips, filling out hollow cheeks, improving scars, elevating deep folds, and repairing various facial imperfections.

Medical skin peels

Chemical peels rejuvenate the skin's appearance through exfoliation, giving you a more even colour with an improved elasticity and tone. The skin is therefore tightened, smoothed and freshened through the stimulation of new skin and collagen growth. Peels can also resolve abnormal pigmentation problems and acne.

Toothwhitening

Teeth are stained by the foods and drinks we consume. Smoking further stains teeth and the natural bright, white shade becomes darkened. Tooth whitening is a successful and simple method of lightening the colour of your teeth. The degree of whiteness achieved will vary from patient to patient and with the type of bleaching process chosen.

Additional choice benefits

Your practitioner may recommend Choice treatments that are not in this brochure. Full details will be provided.
